S U M M A R Y

Seeking to further my education and gain a Master's Degree at the University of Kentucky in Applied Environmental and Sustainability Studies. I am hardworking, enthusiastic, and highly skilled in problem-solving and critical thinking. With my passion for nature and the environment, I plan to take this degree and be a part of the generation that tackles the future in sustainability.

RESEARCH INTERESTS

- Potential research interests in the field of Environmental Science and Sustainability are climate change, renewable energy, and conservation biology. I have always been passionate about the science behind things and with my animal science and biology background the topics in conservation biology like invasive species and habitat loss would be very interesting topics to me.

RELEVANT COURSEWORK/LAB EXPERIENCE

- *GEN 100: ISSUES IN AG, FOOD AND ENVIRONMENT* – In this course, I was able to learn about various environmental issues facing the agricultural world and how these issues affected farmers to consumers. Potential solutions to these issues were discussed in the course and evolving technologies that we have today. During the course, I was able to get out of my comfort zone and discuss and tackle different environmental issues and challenge myself to devise possible solutions.
- Many of the courses I have taken throughout my undergraduate career have allowed me to gain immense knowledge in technical writing and greatly improve my writing skills. These courses have also allowed me to improve my oral communication skills as well.
